

Unspeakable Horror: The Department of Homeland Security Begins American Genocide with Biochemical Weapon.

Genocide: "Any of the following acts committed with intent to destroy, in whole or in part, a [national](#), [ethnic](#), [racial](#) or [religious](#) group, as such: killing members of the group; causing serious bodily or mental harm to members of the group; deliberately inflicting on the group conditions of life, calculated to bring about its physical destruction in whole or in part; imposing measures intended to prevent births within the group; [and] forcibly transferring children of the group to another group."¹

The first treatment of a biochemical "pesticide" known as Checkmate, was completed on the anniversary of the tragic 9/11 attack.

In order to initiate the aerial spray, which occurred on 9/09/07 over populated area's of Monterey County, the US EPA initiated an emergency exemption under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) for the light brown apple moth (LBAM). The reason: the "USDA estimates the impact on plant production costs may exceed \$100 million in the state of California."²

No Legitimate Evidence of Moth Harm

This proclamation of impact comes even though: "To this date, however, no crop damage has been reported locally, according to Ken Corbishley, the county agricultural commissioner."³

It is not crop damage that that allowed for the EPA to file an exemption, but rather the fact that the LBAM is an invasive species.⁴

Funding from the Homeland Security

Department of Homeland Security Daily Open Source Infrastructure Report August 13, 2007 states: "USDA announces additional funds to control light brown apple moth."⁵

The fact that Homeland Security is funding the aerial spraying is cause for alarm, because clearly the people in charge believe that aerial applications are urgent.

So urgent is the supposed need to spray, that "The state warned if the light brown apple moth wasn't stopped, the U.S. Department of Agriculture would step in and take over."⁶

Drastic Eradication Measures Do Not Correspond to Science or Logic

What has dumbfounded people is the feeling that they are being personally attacked by the aerial spraying of Checkmate. Protestors hold up signs that say, "We are not moths." They say this, because the aerial applications are scheduled to take place over their homes. People will be in contact with the supposed moth pheromone for

30 days at a time, while the pheromone is time released into the air.

These all seem like drastic, and unnecessary measures, for a moth for which there is no evidence of damage. Even though twist ties, and sticky traps are effective at limiting the moth, these options seem for some reason to be unappealing to the California State Department of Food and Agriculture (CDFA). During one session, the claim by CDFA Secretary A.G. Kawamura, was that the state had to eliminate the moth as fast as possible, and that the only way to this was the aerial treatments. Yet it does not make any logical sense, because, aerial treatments are designed to disrupt mating habits, and are designed for long term containment, not short term elimination. At least one year of spraying planned, continuing in March 2008, for 9 months in a row, every month. Aerial treatments are planned to continue to as late as 2010, which coincidentally is the maximum amount of time given to use an untested pesticide under the EPA emergency quarantine exemption.

Intent to Destroy

When you look at the attached aerial spraying map. You will see something that is deeply disturbing. The zones for aerial spraying, do not seem to closely follow the LBAM moth trap finds. In other words, it seems like the aerial boundaries are arbitrary and capricious.

What is most alarming, is that two grids have been laid out, over the highly populated area's of Santa Cruz County and Monterey County consisting of approximately 100,000 people. It looks almost as if these cities are the targets of the aerial spraying, with the two other spray boundaries in between them, merely added to distract the eye.

The Checkmate formulations are claimed by the EPA, USDA, and CDFA to be safe. The reason is that, they are supposed to be *Bacillus thuringiensis* (B.t.) formulas. Bt's are naturally-occurring soil bacterium that produces poisons which cause disease in insects but lack of toxicity to humans or the natural enemies of many crop pests. One individual who participated in the late 1970's and early 1980's in forestry efforts to eliminate another moth with Bt chemicals, claimed that she got sprayed with the chemicals several times, that she stored the chemicals, and that moth's would flock to her when the chemicals were on her clothes; all without any noticeable side effects.

As you will see, it is impossible to believe that solely a Bt formula is being applied due to the over 200 health complaints filed from Monterey County Residents after the first aerial application. The real number of health effects is many times greater than this 200, but a variety of factors, including doctor's refusal to see patients who are affected by the chemicals, has limited the reports. Knowingly applying some other substance than the Bt formula with no side effects, especially a formula which is known to cause harms to humans, would qualify and intent to destroy.

Serious Bodily Harm & Hiding Facts About Harm

One of the complaints was that an 11 month old baby nearly died from asphyxiation due to contact with Checkmate. Other severe complaints include: intestinal distress, coughing up blood, severe lethargy, severe rashes from playing outside, headaches, and female reproductive disorders. Several people went to the emergency room due to aerial treatments.

The CDFA claims that the Checkmate formulations, along with the micro-flake mating disruption and isomate pheromone's are totally safe. Originally on their website, they had an online flyer stating that one should not be outside during the spray, and not touch anything that had been sprayed. Later they removed these statements claiming that these precautions are now unnecessary.

The CDFA is also hiding their plans to spray Santa Cruz County beginning 11/4/07 for six nights. They have removed the treatment map from their website, and they have not sent out the required warnings to citizens yet. If the CDFA is so confident about the health and safety of their program, then why are they trying to not give notice to citizens about aerial spraying? It is almost as if the CDFA is pretending like they won't spray.

Normally, when one files a complaint with the CDFA, regarding a possibly dangerous food, the CDFA may immediately issue a large recall of the food item, sometimes without any evidence that the food is even hazardous.

Of the 117 signed health claims submitted to the CDFA, not one has been investigated. No recall of the aerial treatments have been issued. No doctor's examinations, no blood chemistry tests, no allergy response tests.

What is the CDFA's purpose in ignoring health claims in this situation? Is there a secret plan?

It is also known that birds can see and eat the microcapsules, and that bee's can mistake the microcapsules for pollen (see article regarding Checkmate and Particle Pollution). Yet the CDFA falsely claims that spraying Checkmate regularly over time will not cause a significant health or environmental hazard.

Calculated to Bring About Destruction & Imposing Measures to prevent Births

Checkmate is formulated in a microcapsule. This is a miniature ball of plastic with a liquid core. It is obvious that inhaling miniature fragments of plastic is unsafe. The micro-flake distribution system, and micro-particles from the biodegradable polymer microcapsule shell, likely fall into the range of particle pollution that cause known human health effects at the sizes between 2.5 – 10 microns. We do not know, because neither the CDFA, nor anyone else, is testing for particle pollution from the microcapsules. Over 36 billion microcapsules were distributed over the citizens of Monterey County during the last aerial spraying. Particle pollution is linked to premature death.⁷

Microcapsules and their associated particles, are also not safe to breathe in unless they are biocompatible - meaning that they are designed to degrade safely in the human body. Since Checkmate was developed for agricultural use, it is not biocompatible. The fact that a non-biocompatible substance is being sprayed on, and thus, touched, absorbed, and inhaled, on tens of thousands of humans, is evidence of a calculated action to bring about destruction of life since the non-biocompatible elements of Checkmate will be harmful to humans.

One of the published ingredients in Checkmate, is a Xenochemical called 2-hydroxy-4-n-octyloxybenzophenone.⁸ "Rapidly increasing scientific evidence suggests that many of these chemicals, structures of which cross a wide range, can interfere with normal, hormonally regulated biological processes to adversely affect development and/or reproductive function in wildlife, experimental animals, and humans"⁹

Chemical messengers in our bodies are called hormones. They are secreted in minute amounts by our glands, to create chemical and physiological changes in our bodies. It is of the gravest alarm to note that 2-hydroxy-4-n-octyloxybenzophenone can bind to human estrogen receptors in men, women and children. Many women who are in the spray zone in Monterey County, have immediately experienced severe symptoms related to their reproductive health. These symptoms include: extremely swollen and tender breasts, exacerbated PMS symptoms, extreme mood swings, hot flashes, sweating, spotting and delayed periods. This even happened to women who were not directly sprayed, but who entered the spray area several days after the spray.

If this Xenochemical is delivered directly into the bloodstream, then even a minute amount, from just one or several microcapsules, could significantly influence estrogen receptors, convincing the body to create chemical reactions. The symptoms described indicate that something in the aerial applications, whether it is a listed or unlisted chemical, is designed to target human estrogen receptors for the purpose of birth control! Clearly a measure to prevent births.

Microcapsules are Drug Delivery Devices

One method for delivering minute amounts of hormone directly into the blood stream, would be a system of micro-encapsulation. Microcapsules in medicine are a new field and can be used to design a slow release drug into the body. In these cases, biocompatible capsules are created so that the body can absorb the capsule shell. The evidence of the symptoms described by those who have inhaled the time release substance within the microcapsules, shows that some aspects of aerial formulations sprayed on citizens, are designed to deliver minute but potent amounts of substances directly into the human bloodstream. Thus, violating FDA laws about delivering untested drugs to the populace, and clearly violating human rights for all who are in the aerial spray path.

It is clear that the used and applied chemical formulation of Checkmate has effects on female reproductive health, and that these affects are not typical with Bt chemicals. Thus a typical Bt chemical is not the only chemical being deployed.

Human Experimentation with “pesticides” by EPA

In February 2005, the EPA released plans to begin, experimenting on humans with pesticides.¹⁰ These plans now include testing on young children and pregnant women. The House and Senate voted to ban these plans, so the EPA has found a work-around solution.

The Checkmate chemicals applied to Monterey County in the last two months, with plans for further applications in Santa Cruz County at the end of this week, fall under the category of human experimentation and are in violation of the Nuremberg Code. It is illegal by EPA's laws to spray pesticides on people. The Checkmate chemicals have never been thoroughly tested due to the EPA's an emergency exemption, until they were tested on the citizens of Monterey County in September and October of 2007.

Finally, in an iron clad set-up, it seems impossible to have any legitimate independent testing of the Checkmate chemicals. We must “trust” the EPA, that these chemicals are safe. Yet they cannot be known to be safe for humans, without first, human experimentation. Apparently these aerial treatments over California citizens are the EPA's experiments.

Why would the EPA violate its own laws, if not for some other plan is at stake? How is it that we allowed, the CDFA to spray people with untested chemicals that do cause harm, while they lie to and mislead the public about the safety of the chemicals.

Senator Barbara Boxer stated, “If the EPA can get away, testing on babies, infants, then they can get away with anything when it comes to human testing.”¹¹

Right now they are getting away with anything, a plain and blatant violation of our human rights, to not to be experimented upon with untested chemicals against our well.

Conclusion

In the 1950's, it is documented that the army released spray containing harmful bacteria in New York and San Francisco as apart of secret human experimentation.¹²

The idea of creating biological weapons that disperse in minute amounts through the air is not new, and it comes from the army.

Enough evidence has been presented here, which shows us the first layer, of a devious plan to eliminate a large population of people.

- #1 Funding from the Department of Homeland Security
- #2 An emergency that is not urgent, but then claimed to be urgent
- #3 Reproductive health effects and other severe health effects
- #4 Spray zones are target for densely populated region on humans, not on biology
- #5 Health Complaints not thoroughly investigated as spraying continues
- #6 Known toxic ingredients in Checkmate, yet EPA & CDFA claims it to be non-toxic
- #7 Spray pattern on city only partially related to moth infestation
- #8 Absence of environmental review, which would illustrate the harms of spraying
- #9 Scientific evidence by environmentalists and chemists ignored.
- #10 Prudent marketing by the CDFA to promote spraying
- #11 Hiding spray plans from scrutiny and from the public and thus surprising people
- #12 Bt chemicals may not have human side effects, while Checkmate chemicals do
- #13 Ignoring direct demands from state legislatures and city councils to stop spraying
- #14 CDFA threatening that USDA will continue spraying
- #15 Clear harm to children, yet spraying continues
- #16 Clear evidence of harm to adults, sick, elderly, and spraying continues.
- #17 Clear evidence of human experimentation, ignored, and spraying continues.
- #18 Safe alternatives to aerial treatments ignored

10 <http://www.epa.gov/fedrgstr/EPA-TOX/2005/February/Day-08/t2371.htm>

11 <http://www.youtube.com/watch?v=dx-VFVwx78>

12 <http://www.youtube.com/watch?v=mrJcmdMfkWQ>

#19 Citizen's needs, wants and desires ignored.

#20 Lack of independent scrutiny of Checkmate formulas.

#21 Original moth find in Berkeley, not in Santa Cruz or Monterey Counties.

#22 Microencapsulation system used to deploy drugs

#23 Microencapsulation system designed with plastics dangerous to human health, yet that fact is not addressed by CDFA, or EPA.

There is only one explanation for these incongruence and facts that allows all the pieces to fit together. Something that explains why cities and not crops are targeted. That explains why human rights are being violated to protect from the possibility of crop damage which there is no evidence for.

This is a plan for a biochemical experiment on humans to test a newly developed chemical weapon, which contains potent hormonal disrupters, and possibly other deadly ingredients.

The weapon is likely designed to have long term affects (1 month to 20 years), to prevent women from having children, and to cause premature death. Its design is likely so that the immediate connection from spraying would remain unrecognized, and that its true ingredients may be difficult to detect.

In this scenario, it is likely that the LBAM was artificially introduced into the environments of Santa Cruz and Monterey Counties to great a false alarm. It was introduced in other counties to make it appear like an infestation. Even though the LBAM did not multiply greatly in Monterey, that area was target as the first aerial location. This is possibly because of the close government ties to the owner of Checkmate's manufacturing firm, Suterra, who also owns Dole. This also would allow for easy monitoring of the results.

Santa Cruz and Monterey Counties have relatively clean air from ocean breezes, and are not too large in size. This is ideal for conducting an experiment such as this because many other air pollutant variables can be eliminated, so that the results of the biochemical can be clearly seen.

A legal structure was formed over a period of time, to try to limit or prevent resistance to the aerial treatments under an emergency exemption.

The light brown apple moth, is not the issue here, but rather is a hoax, or a front, for the CDFA, EPA, and USDA, under the direction of the Department of Homeland Security, to experiment on citizens.

Future Strategies to Look For To Prove Genocidal Plans

Already Moth Quarantines have begun for the gypsy moth. Thus a new emergency already declared, and in the future, another EPA exemption would allow 3 more years of aerial treatments.¹³

Moth's will continue to be found in other locations, thus somehow requiring the need for aerial applications all over the state, perhaps the country.

Health affects will continue to be ignored, and public relations doctors and scientists will continue to try to claim it is safe.

News media and other tactics will be employed to downplay harm of aerial treatments.

Motive

Like with any war, the motive is evil. The purpose to kill and deny life. Why do humans do this? They do to others, what they do to themselves. Violence, begets violence.

Really there is no justification violence between groups of people, and yet even today, genocide is occurring.

13 Moth Quarantines, for the Light Brown Apple Moth, and the Gypsy Moth, are listed as emergencies throughout California.

<http://www.cdca.ca.gov/Regulations.html>
